

Description

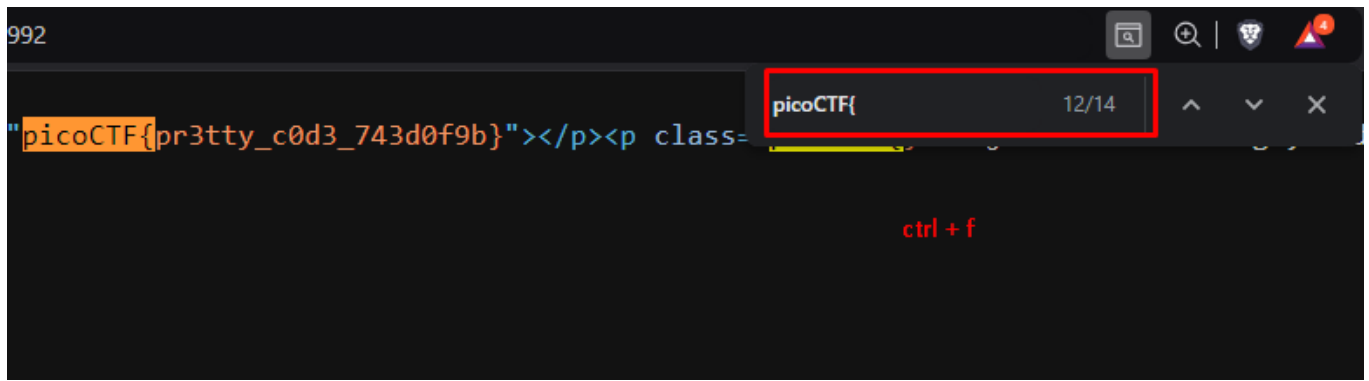

I don't like scrolling down to read the code of my website, so I've squished it. As a bonus, my pages load faster! Browse [here](#), and find the flag!

Hints

- Try CTRL+U / ⌘+U in your browser to view the page source. You can also add 'view-source:' before the URL, or try `curl <URL>` in your shell.
- Minification reduces the size of code, but does not change its functionality.
- What tools do developers use when working on a website? Many text editors and browsers include formatting.

Solución

Bandera
